

Run of Show

a workflow engine the concierge conducts

A proposal to retire Plane as Beckett’s execution backend and replace its one fixed ticket lifecycle with a per-task, concierge-authored workflow: stages, iteration budgets, parallel fan-out and gates composed at filing time — not compiled into the dispatcher.

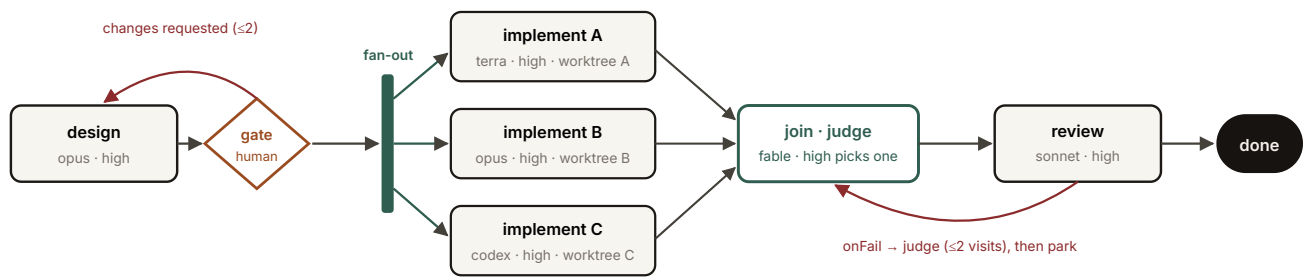

Fig. 3 — a bake-off run of show. Design → human gate → three isolated candidate implementations → a judge join that picks (or synthesises) a winner → fresh review → done. Six nodes of data. Under the current engine this is three hand-filed tickets, a human doing the judging, and no joint lineage.
